Education

2015–2019	Master of Science in Economics, University of Copenhagen Thesis: "Dynamic residential sorting – A register based analysis of households' willingness to pay for job density" Advisors: Bertel Schjerning & Anders Munk-Nielsen
2013–2015	Bachelor of Arts in Philosophy, University of Copenhagen Thesis: "Menneskets Fri Vilje – Neurovidenskab og et klassisk filosofisk problem" Advisor: Jan Faye
2010–2015	Bachelor of Science in Economics, University of Copenhagen Thesis: "Priselasticiteter i udenrigshandlen – En økonometrisk analyse af priselasticiteten for danske branchers eksport" Advisor: Heino Bohn Nielsen

Positions

2023–	PhD Fellow, Department of Economics, Copenhagen Business School
2018–2023	Director of Data and Analytics, Mover Systems
2016–2018	Research Assistant, Department of Economics, University of Copenhagen
2015–2018	Socioeconomic consultant, HBS Economics

Research

Separations without Unemployment: The Escape Margin across Local Labor Markets *Job market paper*

This paper studies how job-finding opportunities shape unemployment disparities across local labor markets. A worker who faces a separation need not become unemployed if she finds another job before the current employment relationship ends – an employment-to-employment (EE) transition. Existing work attributes differences in local unemployment primarily to how often employed workers lose their jobs; I show that job finding also matters through this escape margin. I develop and estimate a structural model of on- and off-the-job search across local labor markets that incorporates this mechanism, using Danish matched employer–employee data whose exact spell dates distinguish direct job-to-job moves from hires out of unemployment.

Local Labor Matching *Work in progress*
Joint with Daniel Borowczyk-Martins and Annaïg Morin

There are large and persistent differences in unemployment rates across local labor markets. Motivated by that observation, we study differences in matching efficiencies across local labor markets. We use panel data on local labor markets from the United States to estimate the local matching efficiencies and find substantial variation. We examine how this heterogeneity correlates with observable characteristics of local labor markets, including industrial composition, worker demographics, and urban density.

Teaching

2024	Teaching Assistant, Macroeconomics, Copenhagen Business School
2018	Teaching Assistant, Advanced Microeconometrics, University of Copenhagen
2017–2023	Teaching Assistant, Econometrics II, University of Copenhagen
